

## Online Version Class Overview

This program is designed for anyone looking to get into Phlebotomy and is great stepping stone to start in the medical field. Whether you have past experience in the field or not, you will be guided every step of the way. You can contact me at any time throughout the entire program. My goal is to make you the best phlebotomist you can be and give tips to help you find employment after program completion.

**Price:** The cost of the online version of the program is **\$575. If you cannot pay in full, a minimum \$300 is required before the start of the program. Payment plans will be made thereafter until the program is paid in full.** Certification and completion of the course cannot be achieved until the program is paid full.

**Work Assignments:** All assignments, quizzes, & tests will be completed online. Power points will be delivered via email. The power points are simplified so you are not overwhelmed with excessive pages of reading materials. Quizzes & test will be sent out once you complete the power point module. You will also receive a study guide for the National Phlebotomy test once you complete the program.

You **MUST** pass all quizzes and tests with at least a **grade of 70%** or better. If you happen to fail a quiz or test you are allowed a second attempt.

**Clinicals:** During the online program you will be **required** to attend hands on training in class of clinicals. Hands on training days are Monday, Wednesday and Friday. During clinicals you will be practicing venipuncture procedures, capillary punctures, venipuncture with the manikin arm, and one on one interaction and lecture on lab practices and any other questions you would like to go over during that time. After you complete the program, you are allowed access to the classroom on days that venipuncture procedures are being practiced for additional experience and practice. Clinicals are done in the classroom.

**Certification:** Once you have completed the program with a passing grade and have attended all clinicals, you will receive a certification of completion and be considered a certified phlebotomist. After you have received your certification, it is highly recommended that you sign up to take the national certified phlebotomy test to receive your license. You are able to get a position as a phlebotomist however it is recommended that you obtain your license as it is preferred by employers.

**License:** After completion of the program and phlebotomy certification is obtained, you are eligible to sign up to take the National Phlebotomy Examination through AMT (American Medical Technologist). They are a widely accepted allied health licensing agency and accepted in all states. The instructor will assist in signing you up for national exam. You **MUST** have a certain number of venipuncture sticks and hours in order to be eligible to take state exam.
